The prime purpose of this book is to present, in small compass, clearly reasoned opinions of men who have treated the philosophy of art not less with simplicity of language than depth of understanding -- novelist and essayist not less than professed critic. A further purpose is to present a brief series of most brilliant descriptions of specific and famous works of art, architecture, sculpture, and painting, by men whose names are synonyms for all that is brilliant. Considered as a whole the collection centres upon a single point, namely, increase of appreciation and love of art behind which, said Rossetti, lies "passionate emotion," and the condition of which is "fundamental brain work." It is a book about men who live, eternal, in their buildings, pictures, sculptures. It is a book by men who have, for the most part, already eternalized themselves in their writings. - Foreword.

For nearly 80 years, shaft-drive boxer twins have traditionally formed the backbone of the BMW motorcycle line-up. For many enthusiasts of the Bavarian marque the classic BMW twin was the R90S of 1973-76. Over the decades, successive generations of durable machines - including the R100S, fully-faired R100RS, four-cylinder K-series, high-performance R1100RS and an entire family of touring and sporting models ranging from 850 to 1200cc - would ensure the BMW boxer twins a place in the Haynes "Great Bikes" series. This book covers: historical context, racing, the wartime R75 and R69S; the "75" series which enabled BMW to compete with the high-performance Japanese machines; the R90S, the "76" and Superbike performance; the R100RS, the "77" and the touring R100RT; smaller twins, smaller potential; the R89G/S, including a Paris-Dakar version; rationalization of the boxer range, and the new twins that included four-valve heads and electronic engine management; and technical specifications from 1969 to 2003.

Boyer/Verma's breakthrough text meets today's student and instructor's needs and redefines the marketplace. Their text is briefer than most, taking all of the vital core concepts and building upon them with current and fresh examples. The authors understand the importance of striking a balance by creating a book that does an even better job at covering the core concepts while also providing customers with a new product that fully addresses and approaches this course area from today's teaching and learning perspectives and actual business practices. The three unifying themes throughout the book are Strategy, Global Supply Chain, and Service Operations. Strategy will serve as an overarching framework and will be used in each chapter to present students with an alternative approach to specific challenges. The authors uses examples from non-US companies and/or organizations in each chapter to incorporate Service Operations in the book. They also show that even some of the largest manufacturing companies today have extensive service activities such as customer support and product development. The Global Supply Chain theme will allow students to see how products move through different companies and countries with Boyer/Verma's use of real world examples throughout his text. In addition the robust Cnow course allows instructors and students to go beyond the printed text to get the most from this exciting operations management program. Summer with Monika is an honest and touching portrait of a romance, charting the progress of a love affair from the delicious intimacy of the honeymoon, with the milk bottles turning to cheese on the doorstep, through the stage of quarrels, jealousy, recriminations and boredom, to the point where love is as nice as a cup of tea in bed. Re-issued for its 50th anniversary, Summer with Monika is a hidden gem of British love poetry featuring beautiful illustrations from Children's Laureate Chris Riddell.

The waters off the West African coast are a menacing red, full of algae thick enough to stand on in places. In nearby villages, mysterious deaths start to occur--and the panic mounts. But before an alarm can be sounded, the sea currents shift, the algae vanishes, and the deaths stop. Everyone is relieved when things return to normal, and local government officials are happy to sweep the publicity nightmare under a rug. An American biological researcher, Avery Madison, is dispatched by his employer to piece together exactly what happened, having long feared an ecological disaster just like this could occur. He's had little evidence to go on before now, and what he finds in West Africa is rapidly disappearing. But Avery knows the danger hasn't disappeared--it has just moved on. When parts of the Caribbean start turning a familiar red right before hurricane season kicks into high gear, the implications are clear. If Avery and his colleagues can't convince the world of what's about to happen, toxic destruction could be loosed on American soil. Will their efforts prove too late?

It is thirteen years since the Railways Act 1993 started the process of privatising British Rail, replacing it with one company owning and managing the infrastructure, an open-access system for freight services and a series of twenty-five passenger franchises let to private companies for a specified period of time. This period has seen almost continuous change, and there is now a new 'triumvirate' framework with the Department for Transport, the Office of Rail Regulation and Network Rail in place, with the third generation of franchises in the process of being let and the number being reduced to nineteen. The Committee's report examines the current franchising system, focusing on the coherence of its objectives, the effectiveness of the process for awarding franchises and the management of franchise agreements, and whether more competition and vertical integration is needed. Findings include that the current system represents a policy muddle which lacks a coherent framework for the development of good services and delivery of value for money for passengers and taxpayers. The only way the Government can increase capacity and improve services for the long-term is to drop the dogmatic pursuit of competition in its decision-making as to what the private and public sectors can and should do in future. The Government's forthcoming long-term strategy for the railways will need to address these issues, and to set out a structure and a strategy capable of securing quality passenger rail services to meet demand over the next half a century.
