A call to redefine mobility so that it is connected, heterogeneous, intelligent, and personalized, as well as sustainable, adaptable, and city-friendly. The twentieth century was the century of the automobile; the twenty-first will see mobility dramatically re-envisioned.

Automobiles altered cityscapes, boosted economies, and made personal mobility efficient and convenient for many. We had a century-long love affair with the car. But today, people are more attached to their smartphones than their cars. Cars are not always the quickest mode of travel in cities; and emissions from the rapidly growing number of cars threaten the planet. This book, by three experts from industry and academia, envisions a new world of mobility that is connected, heterogeneous, intelligent, and personalized (the CHIP architecture). The authors describe the changes that are coming. City

administrators are shifting from designing cities for cars to designing cities for people. Nations and cities will increasingly employ targeted user fees and offer subsidies to nudge consumers toward more sustainable modes. The sharing economy is coaxing many consumers to shift from being owners of assets to being users of services. The auto industry is responding with connected cars that double as virtual travel assistants and by introducing autonomous driving. The CHIP architecture embodies an integrated, multimode mobility system that builds on ubiquitous connectivity, electrified and autonomous vehicles, and a marketplace open to innovation and entrepreneurship. Consumers will exercise choice on the basis of user experience and efficiency, aided by “intelligent advisors,” accessible through their mobile devices. An innovative mobility architecture reconfigured for this century is a social and economic necessity; this book charts a course for achieving it.

Euclid was a mathematician from the Greek city of Alexandria who lived during the 4th and 3rd century B.C. and is often referred to as the "father of geometry." Within his foundational treatise "Elements," Euclid presents the results of earlier mathematicians and includes many of his own theories in a systematic, concise book that utilized a brief set of axioms and meticulous proofs to solidify his deductions. In addition to its easily referenced geometry, "Elements" also includes number theory and other mathematical considerations. For centuries, this work was a primary textbook of mathematics, containing the only framework for geometry known by mathematicians until the development of "non-Euclidian" geometry in the late 19th century. The extent to which Euclid's "Elements" is of his own original authorship or borrowed from previous scholars is unknown, however despite this fact it was his collation of these basic mathematical principles for which most of the world would come to the study of geometry. Today, Euclid's "Elements" is

acknowledged as one of the most influential mathematical texts in history. This volume includes all thirteen books of Euclid's "Elements," is printed on premium acid-free paper, and follows the translation of Thomas Heath.

First published in 1924, this classic four-volume work contains various Greek and Latin writings of religious or philosophic teachings ascribed to Hermes Trismegistus, with Walter Scott's extensive notes, commentary, and addenda. It is said that these teachings are records of private, intimate talks between a teacher and one or two of his disciples. The setting was in Egypt under the Roman Empire, among men who had received some instruction in Greek philosophy, and especially the Platonism of the period, but were not content with merely accepting and repeating the cut-and-dried dogmas of the orthodox philosophic schools and sought to build up, on a basis of Platonic doctrine, a philosophic religion that would better satisfy their needs. Included here are the libelli of the Corpus Hermeticum, the Asclepius, the Hermetic excerpts in the Anthologium of Stobaeus, and other fragments. The entire text is produced in the original Greek or Latin, with an English translation on facing pages. Volumes II, III, and IV of *Hermetica*, which contain Scott's notes on the work, his commentary, and testimonia, extensive addenda, and indices, are also published by Shambhala.

National expenditures for medical care in the months and days preceding death are enormous. But we do not know whether that money is buying good quality care or optimizing the quality of life of those dying, or whether the situation is getting better or worse over time. The information that exists â€œdescribing

deathâ€" at a national level â€" though some of it is very informative â€" is fragmentary. This report recommends ways to fill the information gaps by better use of existing nationally-representative data, and through some new measures, in particular, a new, ongoing National Mortality Followback Survey. The aim is to allow us to benchmark where we are today as a society, and what goals we can set to minimize pain and suffering and maximize the quality of life of all of us who will die in the years to come. Provides guidelines and examples for handling research, outlining, spelling, punctuation, formatting, and documentation.

The second edition of this book is designed for beginning and experienced authors, for nurses who want to write articles about their practice, and for graduate students in nursing to guide their preparation of papers for both courses and publication. Developing the ability to communicate in writing is an essential outcome of nursing programs, particularly at the graduate level. This book is a widely used resource on all aspects of: writing EBP papers, reporting research for use in practice, disseminating the findings of clinical projects and innovations, and preparing manuscripts for publication. The text includes new content that focuses on the dissemination of information in Evidence-Based Practice (EBP). Varied models of EBP are presented with an emphasis on how to

disseminate evidence to different audiences, including how to prepare critical appraisals of research studies with implications for practice, literature reviews and syntheses, and other types of written reports that contribute to EBP.
