As healthcare becomes more complex, the integration of all members of the team becomes even more important. Part of this integration requires that all team members have a grasp of the fundamentals of the medical and surgical treatments they are involved in. Written specifically for paramedical professionals who support doctors and nurses, *Clinical Procedures for Medical Technology Specialists* presents a clear and concise description of the more common diagnostic and treatment procedures used in current medical care. While a great many texts describe medical and surgical procedures, there are few, if any, aimed at the large, diverse group of professionals who directly support the medical system. Moreover, these sources tend to have more detail than is required for a paramedical professional. Carefully organized in an encyclopedic format that allows easy access to just the right amount of information, this book supplies nonclinical members of the modern integrated healthcare team with a more complete perspective of the clinical experiences of the clients of the system — the patients.

Fear of pain is the number one reason people give for not making regular visits to the dentist. At the same time, a majority of dentists report experiencing anesthesia-related problems during restorative dental procedures. If dentists are able to provide painless treatment, patient compliance and satisfaction are likely to improve. Pulpal anesthesia is a vital part of the delivery of dental care for restorative dentists and endodontists. Administration of local anesthesia is invariably the first procedure they perform and it affects everything they do thereafter. If the patient is not adequately anesthetized, difficulties inevitably arise. This book will help you successfully anesthetize your patients using the newest technology and drugs available. It presents the rationale, advantages, and limitations of the various anesthetic agents and routes of administration. A special emphasis is placed on supplemental anesthetic techniques that are essential to the practice of dentistry.
