A pioneering critic, educator, and poet, I. A. Richards (1893-1979) helped the English-speaking world decide not only what to read but how to read it.

Acknowledged "father" of New Criticism, he produced the most systematic body of critical writing in the English language since Coleridge. His method of close reading dominated the English-speaking classroom for half a century. John Paul Russo draws on close personal acquaintance with Richards as well as on unpublished materials, correspondence, and interviews, to write the first biography (originally published in 1989) of one of last century's most influential and many-sided men of letters.

A regional and transnational history of anarchism in Korea. This book provides a history of anarchism in Korea and challenges conventional views of Korean anarchism as merely part of nationalist ideology, situating the study within a wider East Asian regional context. Dongyoun Hwang demonstrates that although the anarchist movement in Korea began as part of its struggle for independence

from Japan, connections with anarchists and ideas from China and Japan gave the movement a regional and transnational dimension that transcended its initial nationalistic scope. Following the movement after 1945, Hwang shows how anarchism in Korea was deradicalized and evolved into an idea for both social revolution and alternative national development, with emphasis on organizing and educating peasants and developing rural villages. “In contrast to dominant Korean-language scholarship, this book has a dialectical understanding of the relationship between anarchism and nationalism, one that understands the importance of nationalism for revolution in the colonial context, but one that also shows convincingly that as anarchism in Korea grew and deepened, it acquired significantly transnational dimensions.” — Christopher Connery, author of *The Empire of the Text: Writing and Authority in Early Imperial China*

Ideas linked to rational choice theory started to appear frequently in the economics literature in the 1960s and 1970s, but the attention given to rationality widened to include commentators presenting far-reaching appraisals and critiques. The literature grew to a steady flow and spanned diverse areas of thought including socialist and 'rational-choice Marxist' assessments, and other approaches including institutional, sociological, psychological, ethical, choice-theoretical, strategic, and game-theoretical treatments of rationality. This diversity of literature led to the creation of this volume. What does rationality mean? Was there some common core of meaning that held all of these seemingly disparate developments together, or were there discernable schools of thought with peculiarities that set them clearly apart from one another? The essays in this volume illustrate that diversity, and despite the variety of approaches there remains a common core of meaning that accommodates not so much a radically different set of concepts of rationality as a highly variegated array of methods and approaches to this subject. Contributors address topics of their choice on the concept of rationality in economics, and the selection of these contributors is meant to represent a variety of backgrounds and approaches.
