You go online to buy a digital camera. Soon, you realize you've bought a more expensive camera than intended, along with extra batteries, charger, and graphics software-all at the prompting of the retailer. Happy with your purchases? The retailer certainly is, and if you are too, you both can be said to be the beneficiaries of "customer intimacy" achieved through the transformation of data collected during this visit or stored from previous visits into real business intelligence that can be exercised in real time. Data Warehousing and Business Intelligence for e-Commerce is a practical exploration of the technological innovations through which traditional data warehousing is brought to bear on this and other less modest e-commerce applications, such as those at work in B2B, G2C, B2G, and B2E models. The authors examine the core technologies and commercial products in use today, providing a nuts-and-bolts understanding of how you can deploy customer and product data in ways that meet the unique requirements of the online marketplace-particularly if you are part of a brick-and-mortar company with specific online aspirations. In so doing, they build a powerful case for investment in and aggressive development of these approaches, which are likely to separate winners from losers as e-commerce grows and matures. \* Includes the latest from successful data warehousing consultants whose work has encouraged the field's new focus on e-commerce. \* Presents information that is written for both consultants and practitioners in companies of all sizes. \* Emphasizes the special needs and opportunities of traditional brick-and-mortar

businesses that are going online or participating in B2B supply chains or e-marketplaces. \* Explains how long-standing assumptions about data warehousing have to be rethought in light of emerging business models that depend on customer intimacy. \* Provides advice on maintaining data quality and integrity in environments marked by extensive customer self-input. \* Advocates careful planning that will help both old economy and new economy companies develop long-lived and successful e-commerce strategies. \* Focuses on data warehousing for emerging e-commerce areas such as e-government and B2E environments.

Seminar paper from the year 2001 in the subject Computer Science - Commercial Information Technology, grade: A (88%), UNITEC New Zealand (School of Information Systems and Computing), course: The Impact of Information Technology on Society, 31 entries in the bibliography, language: English, abstract: 1 Introduction 1.1 Electronic Commerce, a Topic of current Interest Electronic commerce (e-commerce) is becoming more and more important in our world. In the beginning, only start-up companies tried doing online business, but today even the old economy has realized that e-commerce can be profitable and can make a company operate more efficiently. Despite the fall of many unprofitable Internet companies in the last months, many businesses still see ecommerce as an opportunity. Therefore, lots of companies have already taken or want to take part in e-commerce. If it is not because of making profits out of the online business immediately, it is due to the fear of missing the train and being left behind, when all other companies have successfully started selling their products or services over the Internet. Moreover, technology is changing very fast and not starting early can lead to a lack of experience, that is desperately needed later on, provided that the technology proves to be a success. Of course, this strategy bears also a high risk. If the technology turns out to be a failure, it would have been better not to have rushed into it. However, the reasons for or against going into e-commerce should not be discussed in this report. Fact is, that many companies have started e-commerce and still today many others try to start online business successfully. As a result, e-commerce has quite a big impact on companies and their customers. For courses in e-commerce.
