A Synopsis of Physiology provides a summary of what is known about human physiology. This book is composed of 24 chapters that describe the histology and normal function of various human body parts. After a brief survey of the chemistry of some macromolecules, this book goes on describing the function of blood, lymph, cerebrospinal fluid, heart, circulator, digestive and respiratory systems, and alimentary canal. Other chapters consider other body part, including internal organs, the endocrine gland, bone, skin, muscle, nerve, spinal cord, and brain. The remaining chapters discuss the normal function of the autonomic nervous system, sense organs, and reproductive organs. This book is of value to physiologists, medical practitioners, and medical students.

Emergency Surgery provides both a practical guide and an understanding of the issues that need to be considered in the management of emergency surgery patients. It presents a clear account of the key issues involved in the assessment, investigation, resuscitation and surgical management of patients who present to the on-call emergency team. It considers the full breadth of issues encountered in these patients including anaesthesia, pre-op resuscitation/optimization, and initial post-operative care including preliminary high dependency/critical care, as well as the complications and acute issues found in acute surgical patients on the ward. It is ideal for surgical trainees as well as trainees from other specialties involved in the care of these complex and challenging patients. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play or the MedHand Store.

Success in any exam requires careful preparation, background reading and, importantly, prior self-assessment. Containing 1000 Single Best Answer (SBA) questions for the MRCS Part A, this book offers surgical trainees a wealth of exam practice, written and edited by expert authors with recent experience of the MRCS syllabus. Get Through MRCS Part A:

Pathways to Pregnancy is a collection of wide-ranging and relatable stories, shared by an expert who also knows first-hand the pain and joy of the fertility journey from her own experience. Instructional and inspirational to anyone going through it or seeking to understand it deeply and in all its variations, these are real stories of hope and humor — and some practical advice that is often overlooked but easy to incorporate into your life. These stories about real women, related by Mary Wong with both compassion and authority, retain many of the subjects' own words and particular perspectives. Through their stories, Mary explains the central principles of fertility treatment by both Traditional Chinese Medicine practitioners and Western doctors. Each story focuses on a set of archetypal challenges or life situations found in patients seeking fertility treatment. In this way, the book serves as a comprehensive examination of the spectrum of infertility experience, expressed through the lens of highly personal anecdotes and intimate experiences.

This book has been written specifically for candidates sitting the oral part of the FRCS (Tr & Orth) examination. It presents a selection of questions arising from common clinical scenarios along with detailed model answers. The emphasis is on current concepts, evidence-based medicine and major exam topics. Edited by the team behind the successful Candidate's Guide to the FRCS (Tr & Orth) Examination, the book is

structured according to the four major sections of the examination; adult elective orthopaedics, trauma, children's/hands and upper limb and applied basic science. An introductory section gives general exam guidance and end section covers common diagrams that you may be asked to draw out. Each chapter is written by a recent (successful) examination candidate and the style of each reflects the author's experience and their opinions on the best tactics for first-time success. If you are facing the FRCS (Tr & Orth) you need this book.

Clinical Scenarios in Surgery: Decision Making and Operative Technique presents 125 cases in all areas of general surgery: GI, breast, hepatobiliary, colorectal, cardiothoracic, endocrine, vascular, trauma, pediatric, critical care, and transplant. Each full-color case begins with a patient presentation and proceeds through differential diagnosis, diagnosis and treatment, surgical procedures, postoperative management, and a case conclusion. Each case includes key technical steps, potential pitfalls, take-home points, and suggested readings. The patient stories in these clinical scenarios provide context to facilitate learning the principles of safe surgical care. This book will be particularly useful for senior surgical residents and recent graduates as they prepare for the American Board of Surgery oral examination.

Surgery Review is a comprehensive review presented in a unique format. Topics are introduced with case presentations and relevant diagnostic and management information is then summarized in easy-to-remember capsules with exam pearls interjected throughout. All areas of general surgery are covered, including the subspecialty areas. There is also a section on basic science found on the in-training exam and written boards, and a section of anesthesia, trauma, and critical care. Unlike many other books, General Surgery Review excludes controversial management in order to present an easy-to-remember foundation of knowledge. Thus, the book focuses on "the basics" to provide the reader with a broad command of the field. This title is indispensable to residents studying for in-training exam or boards, and is also popular with practitioners preparing for their recertification exam in general surgery.

The goals of our book are to prepare students for final examinations and to prime them and young surgeons to face the real world of surgical practice. To achieve these goals, we have been listening to feedback from students and colleagues whose advice has been invaluable. Accordingly, in this fourth edition, we have made changes in the content as well as the format. We have been warned that many eager students move to the provided adjacent answer before allowing time to solve a question on their own. The advice was to move answers to the end of each chapter. We hope this change will generate, in students, enough sense of excitement and curiosity to motivate them to think, analyze and choose the most appropriate diagnosis and management. We have made more extensive changes in the content. The number of plain MCQs has risen from 678 to 753. Two new section of clinical photographs and clinical imaging-based questions have added further 117 MCQs. Stress has been laid on more case scenario questions, with the aim of consolidating knowledge obtained from textbooks and adapting it for use under common surgical situations. We still encourage students to use this book for evaluation of their grasp of the science of surgery and for the purpose of a quick review before examinations. We hope it will be of value in this regard and that it will be as enjoyable and thought stimulating for the reader as it has been for us in the process of composing.

This book traces the 30 year development by surgeons and engineers in Oxford

of a unique method of unicompartmental knee replacement with the 'Oxford Knee' prosthesis.

Blackwell's Clinical Surgery has established itself as an excellent indispensable resource for undergraduate medical students and house officers. With a strong emphasis on clinical practice and the necessary knowledge and skills, this is a must-buy for anyone going on a surgical rotation. Clinical Surgery is intended to teach you everything you need to know about surgery at the start of your career. Pre-publication quotes "I do not think it is an understatement to say that it is a revolutionary book. It is obviously written with integrated courses very much in mind and manages to integrate the basic sciences with clinical information very well.... Maybe above all things, this is a very practically orientated book and really attempts to mould the medical student in to a very good house officer." SHO, Leeds

Cracking the MRCS Viva is an outstanding guide to the MRCS Viva examination. Its unique approach recreates the structure and content of each individual viva, allowing the reader to self-test, or two students to recreate mock viva sessions for themselves. Divided into six sections to mirror the exam - applied surgical anatomy, operative surgery, applied surgical pathology, principles of surgery, applied surgical physiology, and critical care - each section covers a range of topics, listed alphabetically, and contains all the information required to pass the exam using concise, bullet-point text, helpful tables and easy to reproduce diagrams. Written by registrars who have all recently passed the MRCS, plus an MRCS examiner, this comprehensive and user-friendly revision guide also contains considerable input from other senior specialists.

Will our future be a paradise on earth with prosperity and freedom for all? Or will

it be a hellish world marked by war, hunger, and poverty? This inspirational book explores some of the timeless struggles that have shaped human history and charts a pathway to building a better world. From innovative solutions for fighting inner-city poverty and ending political gridlock to enabling workers to share in the wealth they help create, the book outlines the steps needed to build an ideal society one that allows every individual the opportunity to pursue his or her own road to happiness.

The aim of this book is to provide a selection of representative MCQs together with a detailed explanation of each answer covering the topic in depth. Each chapter has been written by experienced Urological surgeons who have already been successful in passing the examination. In addition to the FRCS(Urol) examination MCQs form the basis of equivalent postgraduate Urological examinations internationally and the scope of this book will be an invaluable addition to individuals sitting the FEBU and similar exams in the USA, Australia and Asian countries. Established consultants may also find the text useful as a 'refresher' in areas outside their subspecialist interest.

What is the best way to plan surgical research? What problems are most often encountered in clinical research? How should a research report be presented at a scientific meeting? These questions and more are all answered in Principles and Practice of Research. The second edition has added new sections on animal research models, the molecular and cellular dimension of surgical research, and practical guidelines for obtaining government and third-party funding. Other improvements include a friendlier discussion of statistics and updated material about on-line computer literature searches. This book provides every clinical researcher with a roadmap around the pitfalls of poorly designed studies, through the jungle of incomprehensible statistics, and over the hurdles of research reporting to a successful study from start to finish.

From the reviews of the first edition: "For me, it is a bible and a must for every Ph.D. or M.D. involved in clinical research, especially in the field of surgery. It should be on the table - not on the book shelf - of both the young as well as the experienced investigator as a readily accessible source of information to avoid the trial-and-error approach to problems in surgical research." #World Journal of Surgery#1 "...a carefully conceived, concise blend of factual theory and principles, practical guidelines, and philosophical perspective... ...I have found it hard to identify any omission (even a selected bibliography on laboratory animals, their care, handling, and anatomy is included) and impossible to single out any individual contribution: each is a treasure - well written, concise, and complete." #The Lancet#2 "The feature of the book is that, despite attention to detail, it maintains a clear and practical approach to the whole field, beginning with the reasons for carrying out research, the types of research, and above all the reporting of research... ...Almost all aspects of research are covered, from small retrospective studies to departmental, institutional, national and international projects... ...The chapter on writing for publication should be compulsory reading for all budding authors." #Journal of Bone and Joint Surgery#3

Cracking the Intercollegiate General Surgery FRCS Viva: A Revision Guide 2e provides the framework and knowledge to pass the non-subspecialty sections of the FRCS (General Surgery) viva and clinical examination. This comprehensive and up to date

K.J. Lee is a world-renowned otolaryngologist and head and neck surgeon. Born in Malaya in 1940 during World War II, through his indefatigable spirit, talent and hard work he was able to change his life. Traveling to America in 1958 to study at Harvard on a full-tuition scholarship, he went on to make an indelible contribution to his chosen medical specialty. Among his many achievements, his drive and determination to support the next generation of ENT surgeons and to improve the healthcare experience for patients stand out. These vocations led to his publications of over 30 books and the seminal textbook, K.J. Lee's Essential Otolaryngology. It is considered the most widely read text in the field in the world, translated into several languages. This memoir covers his work as a government adviser for healthcare reform, and his founding the nonprofit foundation to encourage caregivers to treat patients as if caregivers are the patients, 'TPIU' (The Patient Is U). In this memoir, he shares his inspiring tale. In his usual spirit of encouraging and supporting the development of junior colleagues, Dr. Lee has chosen to tell his story through three Columbia University writers - Sally Jee, Clementine Li, and Coco Ruan. Their own education and background have enabled them to fully understand and appreciate his story and communicate it in the words and style of K.J. himself, capturing his very essence and his unmistakable voice. Leeway is a tale of hard work and perseverance, reaching beyond expectations, positivity and forward-thinking, love and family, and above all, success against the odds. A memoir of surgeon K. J. Lee. Reaching Beyond Expectations, from the hideouts of Penang to Harvard and beyond; determination, hard work, ingenuity, emphasizing check lists that you look at frequently, anticipating problems and avoiding them, making lemonade out of lemons, being empathetic, learning from adversities and mistakes and trusting God's guidance. God helps those who help themselves. With God, all things are possible. The FRCS (Tr+Orth) exam is a serious challenge for Orthopaedic Specialist Registrars and represents one of the final hurdles on the path to becoming a Consultant Orthopaedic Surgeon. Trauma for the FRCS (Tr+Orth) Examination is a dedicated revision resource for trauma that provides candidates with high quality self-assessment in order to maximise exam success. Written by expert consultants and senior trainees/fellows, this book features over 100 Single Best Answer Questions, over 70 Extended Matching Questions, and 70 Vivas specialising in trauma. Each answer contains an up to date explanation, and helpful sources for further reading to ensure quick identification of key areas you need to focus on more thoroughly. This revision resource is ideal for preparing you for the trauma questions within this challenging exam.

Illustrative Guide to Cataract Surgery by Editor, Dr. Amar Agarwal and Associate Editor,

Soosan Jacob is a unique book that includes matching step-by-step clinical photographs, medical illustrations, and videos to explain the most common techniques and steps in cataract surgery. With more than 650 illustrations, ophthalmologists and residents will visually learn the most essential procedures in cataract surgery, step-by-step. The content, comprised from leading ophthalmic surgeons, is structured into systematically divided sections such as phaco surgery, microincision cataract surgery, challenging cases, and complications. It allows for quick reference, without having to search through voluminous books. Each image is supplemented with concise, informative text that helps further explain the techniques. In addition, video instruction is offered through a companion website, with each book purchase. Using the same approach as the book, the website presents videos that match each technique or step in cataract surgery. Just a few of the procedures explained:

- Vertical chopping
- Biaxial microincisional cataract surgery
- Posterior polar cataract
- Iris hooks in small pupil phaco
- Subluxated cataracts
- Torn rhexis
- Glued IOL implantation
- Intraocular lens implantation

With a combination of matching photos and illustrations alongside brief text and companion website, Illustrative Guide to Cataract Surgery stands apart from traditional books.

Ever since the publication of the first edition in 1997, the Companion to Specialist Surgical Practice series has met the needs of surgeons in higher training and practising consultants by providing contemporary, evidence-based information on the sub-specialist areas relevant to their general surgical practice. All eight volumes are thoroughly edited and supported by evidence-based references to support key recommendations. This new Fourth Edition brings together the relevant state-of-the-art specialist information that the editors and authors consider important for the practising sub-specialist general surgeon. Purchase of a print book also includes a downloadable version of the eBook. A standardised approach is used across the series to provide up-to-date information in a way that will be consistent and familiar to the reader. Each volume gives a current and concise summary of the key topics within each major surgical sub-specialty. Each volume highlights evidence-based practice both in the text and by also identifying the key papers in the extensive list of references at the end of every chapter. Written by an expanded group of authors with an increased international dimension to the content of all volumes. Provides an update on all the key areas of general surgery and its practice, including day case surgery, abdominal hernias, the management of sepsis and the intensive care patient.

Ulster has produced an impressive number of surgeons who have gained world-wide renown. None has been more celebrated, or more deserving of a biography than Sir Ian Fraser whose life spanned almost the whole of the 20th century. Following a brilliant university career, Fraser's training occupied most of the inter-war years. As with most innovatory surgeons, his career really flourished in war-time conditions. During the Second World War, he was at the forefront of the early field trials of a drug that would benefit the whole of mankind - penicillin - first, in the crucial allied victory in North Africa and then in Italy. For the courage and skill he consistently showed during during these campaigns, he was awarded

the Distinguished Service Order. In 1945 came his timely appointment to the surgical staff of the Royal Victoria Hospital Belfast, in which he was to serve with equal distinction until his retirement in 1966. Richard Clarke's sympathetic, insightful and not uncritical biography could only have been written by someone who was taught by Fraser and who then worked alongside him. The outcome is a fascinating, and informed overall view of Sir Ian Fraser, the surgeon, the teacher, the writer and, above all, the man.
